

## **NET Device Corp Announces CE-Mark Approval for NET Model 901**

MT. LAUREL, New Jersey – April 3, 2009 – NET Device Corp, a leading developer of medical devices for the treatment of drug addiction, announced today that its NET Model 901 device has received CE-Mark approval in conformance with European regulations.

Like its NET Model 804 predecessor, NET Model 901 delivers transcranial electrostimulation, known as NeuroElectric Therapy (NET™), to treat persons addicted to nicotine, alcohol, cocaine, heroin, methadone, methamphetamines and other drugs and drug combinations. This next generation NET Model 901 enables download of personalized treatment protocols to the device based on the patient's poly-drug profile.

NET Model 901 non-invasively effects neuromodulation using ultra low levels of electrical current, and re-establishes natural levels of brain neurotransmitters which have been disrupted through chronic drug misuse. Combinations of electrical waveforms are tailored to the individual's (poly)substance use profile to achieve rapid drug detoxification. Furthermore, re-stimulation of normal production of neurotransmitters substantially removes long-term cravings, enabling addicts to proceed more easily through rehabilitation.

Studies have shown that combining NET with residential rehabilitation produces drug-free behaviour in 80% of subjects at 1 to 8 years from treatment. In a double-blind, randomized, placebo-controlled study, in which NET was used to treat opiate and cocaine in-patient addicts, a "comfortable detoxification and substantial improvement" was achieved.

"We are extremely excited by the CE-marking and launch of our state-of-the-art NET Model 901, as we transition into a commercial company", said Joe Winston, CEO of NET Device Corp.

CE-marking of the NET Model 901 by an independent certification body permits sale of the medical device throughout the European Union and the European Free Trade Association (EFTA) countries of Iceland, Liechtenstein, Norway and Switzerland.

### **About NET Device Corp**

NET Device Corp is the world's leading innovator and provider of transcranial electrical stimulators for drug addiction. The Company develops, manufactures, and markets innovative, science-based NET medical devices that greatly ameliorate the undesirable acute symptoms of detoxification and substantially remove the long term cravings of individuals addicted to licit and illicit substances. Privately held NET Device Corp is headquartered in Mt. Laurel, NJ, USA, with subsidiaries in the UK and South Africa.
